

BookShop Application

Create a Web Server For Book Application Using Express. In your Server there are two routes.

1. User
2. Books

1. In User routes You have to design following APIS.

- | | |
|-------------------------------|------------------|
| 1. getAllUsers | -- get Method |
| 2. getUserById | -- get Method |
| 3. findUserByEmailAndPassword | -- post Method |
| 4. addUser | -- post Method |
| 5. editUser | -- put Method |
| 6. deleteUser | -- delete Method |

2. In Books routes You have to design following APIS.

- | | |
|------------------------|------------------|
| 1. getDistinctSubjects | -- get Method |
| 2. findBookbySubject | -- get Method |
| 3. getAllBooks | -- get Method |
| 4. getBookById | -- get Method |
| 5. addNewBook | -- post Method |
| 6. deleteBookById | -- delete Method |
| 7. editBookById | -- Edit Method |

**Note : - 1. Please Refer bookshop.sql for database tables
2. You need to test all above APIS on Postman tool**
